

ABSTRACT

The present invention relates to fabric treatment compositions comprising at least one or more cationic silicone polymers, comprising one or more polysiloxane units and one or more 5 quaternary nitrogen moieties, and an nitrogen-free silicone polymer wherein the ratio by weight of the cationic silicone polymer to the nitrogen-free silicone polymer is from 10:1 to 0.01:1, preferably from 5:1 to 0.05:1, and more preferably from 1:1 to 0.1:1. A process for preparing such compositions, a method of treating substrates and the use of such compositions are also described.
